

# Fourth Attack

## Computer Laboratory 2-II

Duration – 1 hour

05/22/2026

- Create a folder in the "**Desktop**" using your Index number
- **e.g. EP 0000**
- Save all answers in that folder.
- Upload the resulting .zip file to the submission portal.

### Questions:

01)

Develop a Student Name Analyzer using Windows Application in C#.

The system should allow the user to:

- Enter student names one by one using a TextBox.
- Store the names in an array.
- Display the entered names in a ListBox.
- Allow a maximum of 5 student names.
- Prevent empty or duplicate name entries.

The System Must Display

- Longest student name
- Shortest student name
- Names in uppercase
- Names in lowercase
- Sorted list of names

Student Name Manager

Enter Student Name:

Analysis Results

Longest Name: Charlie

Shortest Name: Bob

Uppercase Names: ALICE, BOB, CHARLIE

Lowercase Names: alice, bob, charlie

Sorted List: Alice, Bob, Charlie

**02)**

Develop a C# Windows Forms application that validates and analyzes password strength using different security rules.

The system should allow the user to:

- Enter a password using a TextBox.
- Validate whether the password:
  - Contains at least 8 characters
  - Contains uppercase letters
  - Contains lowercase letters
  - Contains numbers
  - Contains special characters
- Display validation messages for missing password requirements.
- Display the total character count of the password.
- Prevent empty password submission.
